

Configuring WAY4™ According to AMEX Requirements (April 2019)

Table of Contents

INTRODUCTION 3

CHAPTER 1. AMEX SETTINGS 4

 Changes to the Method for Enabling Support of New AMEX Requirements 4

Introduction

This document describes how WAY4™ must be configured to comply with AMEX American Express Global Network Services (AEGNS) requirements set forth in Release 19.1 documents.

Chapter 1. AMEX settings

To comply with AMEX requirements, WAY4 version 03.47.30.70 or the newer version 03.47.30.XX, if version 03.47.30 is used, must be installed at the bank or processing centre. If the bank or processing centre uses WAY4 version 03.48.30, version 03.48.30.07 or higher must be installed.

These payment system requirements are supported by NetServer version 6.1.264 or higher and by Transaction Switch version 1.1.325-4490 or higher.

The payment system will notify banks of the date and time when the new requirements become effective.

To fulfill the release requirements, for the NetServer platform add the following parameter to the "NETWORK" section of the payment system channel configuration files:

```
<MODULE TYPE="NETWORK">
...
<PARAMETER NAME="RELEASE" VALUE="1902"/>
...
</MODULE>
```

Changes to the Method for Enabling Support of New AMEX Requirements

Starting from WAY4 version 03.47.30 and Transaction Switch version 1.1.297-3111 a new technology is used to enable support of payment system release requirements.

Transaction Switch configuration file parameters and WAY4 global parameters are no longer used to enable support of new release requirements. Now support of new release requirements is enabled using records in the database table IPS_RELEASES.

If the bank (processing centre) used the "AMEX_RELEASE" global parameter, when moving to a new technology this parameter can be deleted after the record has been configured in the "IPS Release Changes" form and release 19.1 has become effective.
