Configuring WAY4™ According to JCB Requirements (April 2019)

Table of Contents

Introduction

This document describes how WAY4™ must be configured to comply with JCB requirements set forth in Release 19.1 documents.

Chapter 1. JCB settings

Since JCB has not published any requirements for Release 19.1, no requirements apply to the WAY4 components versions.

Changes to the Method for Enabling Support of New JCB Requirements

Starting from WAY4 version 03.47.30 and Transaction Switch version 1.1.297-3111 a new technology is used to enable support of payment system release requirements.
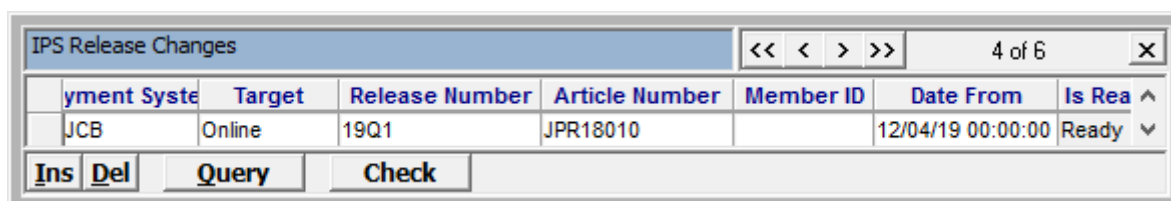

Transaction Switch configuration file parameters and WAY4 global parameters are no longer used to enable support of new release requirements. Now support of new release requirements is enabled using records in the database table IPS_RELEASES.

If the bank (processing centre) used the "JCB_RELEASE" global parameter, when moving to a new technology this parameter can be deleted after the record has been configured in the "IPS Release Changes" form and release 19.1 has become effective.

Configuring Transaction Switch

For the requirement "JCB Regulatory Publications. System Specifications – Online Interface Guide. Chapter 5 Message Format" (Online Interface Guide(P30-P35,P43,P60-P63).pdf) related to field 48 transmission in response to an authorisation request to be supported, do as follows.

In the "IPS Release Changes" form (Full → Configuration Setup → Main Tables → IPS Release Changes), add the string:

IPS Release Changes						<< < > >>	4 of 6	X
yment Syste	Target	Release Number	Article Number	Member ID	Date From	Is Rea		
JCB	Online	19Q1	JPR18010		12/04/19 00:00:00	Ready		
Ins Del	Query	Check						

The *Date From* field's value must be specified according to the payment system recommendations.

For more information about work with the "IPS Release Changes" form, see the section "Support of payment system release requirements" of the document "Interchange Routing".
